

Rosengrens Cassio

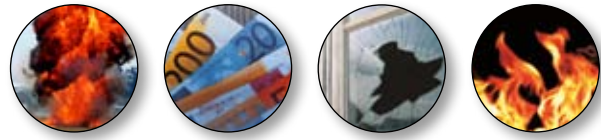

Burglary, fire and explosives protection
of your valuables

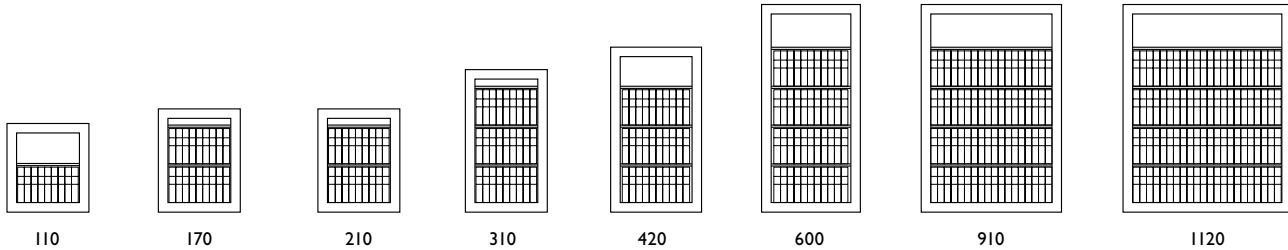

Cassio is a high-resistance range of safes offering certified protection in Grades III–VI. In addition, Cassio is approved for one hour's protection of paper documents from fire and for resistance against explosives. This ensures maximum protection for your valuables. The safes are available in eight sizes ranging from 110 to 1100 litres in capacity. Each model has dual locking as standard and a choice of interior fittings. A deposit drawer, air tube or deposit slot can be fitted to the safe and shock, thermal and seismic detection sensors can also be added for extra protection.

Burglary protection: Cassio safes offer certified high-strength protection in Grades III, IV, V and VI. The whole range has been approved by the most renowned European test institute, ECB•S, in accordance with the EN 1143-1 standard. To achieve such a high class of certification for a safe, Cassio was tested with a range of attack tools, from hammers and drills to oxyacetylene torches and disc cutters.

Explosives protection: In addition, ECB•S has awarded Cassio the EX certificate for Grades III–VI (EN 1143-1). This means the safes offer approved resistance against explosives – a particularly high level of protection for your valuables.

Fire protection: Cassio also has the NT Fire 017 – 60 Paper certificate from test institute, SP. This guarantees that the range will provide up to one hour's protection for documents from fire.

Locks: A wide range of key locks, combination locks or electronic locks are available for Cassio safes. In order to maintain a level of protection which matches the safes' high grade of burglary resistance, all the locks are approved in accordance with the EN 1300 standard. Grade III safes must be fitted with at least one Grade B lock, Grade IV and V safes with at least two Grade B locks and Grade VI safes with at least two Grade C locks. A third lock can be fitted under certain conditions.

Options: The following additions can be made to a Cassio safe: drawer deposit for models 110–210, air tube or deposit slot (non-certified); up to four safe deposit lockers columns (models 600–1120); DOCT alarm system with in-built shock, thermal and seismic detection sensors. Safes with extra protection against diamond core drills (CD) may also be requested.

Quality and environmental management systems: Rosengrens Cassio safes are manufactured in accordance with ISO 9001 for quality management systems and ISO 14001 for environmental management systems.

Rosengrens Product Guidelines: The construction of Cassio safes has been tested and approved in accordance with Rosengrens Product Guidelines, based on the relevant European standards. The aim is to check user-friendliness, safety and product lifecycle as an assurance to customers that our products will live up to the highest expectations.
